

Prince Charles Hospital, Cwm Taf, Gurnos

We are delighted to announce that after a comprehensive trial involving various suppliers at Prince Charles Hospital in Merthyr Tydfil, South Wales, our M9 Trauma Stretcher has been chosen as the preferred option for their trolley renewal project in A&E.

The fully electric profiling will help reduce the manual handling burden on staff in this busy environment whilst the class leading 'low height' will make it safer and easier for patients to enter and exit the platform. The outstanding 'low height' was also deemed to help speed up the process for evaluating patients for discharge by eliminating the need to transfer to a bed for evaluation hence increasing efficiency and patient throughput.

Prince Charles Hospital is the second Hospital in the South Wales region to have chosen Howard Wright as its preferred supplier for its patient trolleys in the last 12 months and we look forward to long standing relationship with this organisation.
