

HOWARD WRIGHT.  CARES

HOWARD WRIGHT.   
**M9** WARD & COMPACT

**Practical, innovative and simply makes human care easier.**

Our Research and Development team worked closely with end users and discovered new opportunities to improve our already well regarded bed design. The latest models have been independently tested to meet the requirements of the latest and most demanding international safety standards.

An outstanding low height of 350mm, easier cleaning and enhanced safety are just some of the key areas we have improved.

The horizontal siderails are an excellent example - they are safer for the patients, easy and intuitive to operate and quicker to clean.

All Howard Wright products are specified with the highest quality components to offer reliability that can be trusted over their entire service life.

Designed using our 'Simple, Smart and Human' values, minimal maintenance and user instruction is required. Customising to your unique needs is easy with an extensive range of specialist options and accessories.

**“Howard Wright beds are very high in quality and have several really good features.”**

**Clinical Nurse Manager TDHB**

Positioning

The M9 Ward and Compact beds are fully electric. Using a single button the bed will automatically contour to a comfortable chair position. Angles and proportions have been selected to suit patients of all sizes.

The bed's sliding backrest improves patient comfort and prevents the patient slipping down the mattress reducing the need for manual patient repositioning by staff.

The low height of 350mm and underbed light improve patient safety by allowing the patient to put their feet flat and securely on the floor when getting on and off the bed.

The bed height ranges from 350mm to 800mm which provides an ergonomic working height for clinicians, caregivers, cleaners and maintenance staff to perform their duties without unnecessary bending.

The M9 Compact is shorter for hospitals with tight spaces but features an integrated bed extension to accommodate taller patients.

“The excellent range of low and high height levels assists in preventing back injuries for nursing staff and provides better access for patient mobility in and out of the bed.”

Design Features

- 1. Tente dual wheel Linea castors have less rolling resistance and require minimal effort to switch between brake, neutral and steer.
- 2. The M9 Compact is shorter for hospitals with tight spaces but features an integrated bed extension to still accomodate taller patients
- 3. A remote handset is available for patient and caregiver use.
- 4. The backrest features a gas filled damper to control the backrest descent when the CPR emergency release is engaged.
- 5. The horizontal siderail is easy to operate and quick and easy to clean.
- 6. The head bed end can be conveniently stored at the foot end to prevent it being lost when transferring patients.
- 7. An optional underbed light and attendant control handset (ACH) is available for caregiver use.
- 8. An optional pull out linen rack can hygienically store linen at the foot end of the bed.
- 9. Simple, smart and human.

Additional features:

250kg safe working load.
Battery backup when mains power is unavailable.
One button flattening of deck.
Power cord storage.
Accessory sockets at each corner of the bed (4 in total).
POAG – potential equalisation terminal.
(Optional) Compact version with integrated bed extension.
(Optional) ACH with underbed light and backlit handset.
